

# Edge Protection Opens New Markets

## INTRODUCING THE EP 100

PMC offers edge protection as a flexible and cost effective method for enhancing the barrier of a paperboard package. This is achieved by covering the exposed inside edge of the sidewall with tape prior to the forming process.

Edge protected paperboard containers have increased resistance to oxygen, scent, moisture transmission and oil absorption.

Packaging for dairy, fresh or frozen foods, dry goods, deli, spreads, soups, snacks, household goods. Packaging for QSRs, grocery markets, convenience stores, and many more applications.
