COMBINING TWO MACHINES INTO ONE

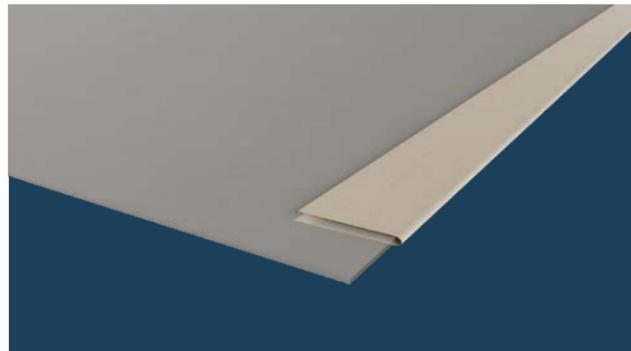

Globally, we have seen an increase in the number of bans for creating products with plastics, and these regulatory efforts are growing the demand for single-use paper products. Packing productivity into a smaller space and allowing you to expand into the paper product market, the Inline 2001S Cup Forming and Edge Protection Machine is an all-in-one platform that combines a cup forming machine with an edge protection machine—delivering the next step in the PMC line of our entirely servo-driven, state-of-the-art machines. In a single solution, the Inline 2001S allows you to create an all-in-one paperboard container or cup that features barrier protection (for flat rim cups). It brings together high-speed, servo-driven production speeds with the ability to enhance the barrier of a paperboard package all in the same machine. It's a cost-effective solution that delivers more productivity in less space.

MACHINE SPECIFICATIONS

SPEED:	Up to 240 blanks per minute	SERVICE REQUIREMENTS:	Electrical — 142 KVA 480VAC 3PH @ 50 HZ
SIZE RANGE:		MAIN AIR SUPPLY:	65 SCFM @ 80 psi (1.8 M3 / MIN @ 5.5 BAR) 1-1/2" MIN. Supply Line
• VOLUME:	4 – 22 oz.	VACUUM SUPPLY:	90 SCFM @ 18" HG (2.5 M3 / MIN @ 61 KPA)
• TAPE LENGTH:	1.6" min – 6.0" max		
• SIWALL LENGTH:	Up to 13.25"		
APPROX. MACHINE WEIGHT:	16,000 lbs (7,286 KG)		

EXPAND TO NEW MARKETS

Adding advanced barrier protection, the Inline 2001S efficiently forms paperboard tapered or straight wall, round and non-round cups and containers. With increased resistance to oxidation, transmission of moisture, and the absorption of oils, this machine is ideal for creating packaging for use with pre-packaged organic and inorganic products—enabling you to explore new markets where paperboard container offerings can deliver enhanced shelf life for products such as dairy.

EFFICIENT. FLEXIBLE. VERSATILE.

Tooling changeover on PMC's servo-driven machines can be achieved within an eight hour shift, making them an excellent choice for small production runs. New enhancements on the Inline 2001S further reduce changeover time, increase efficiencies and improve ergonomics. Flat rim tooling provides perfect solution for membrane application in dairy products.

GET MORE DONE, IN LESS SPACE

By combining the 2001S and EP 100 into one single platform, we've created a dual purpose machine that efficiently produces containers up to 240 CPM in a compact footprint—facilitating a new level of productivity for your operation.
